

ASSIGNMENT – 14.3

Name : Ch.CharanKumar

ROLL: 2303A54006

Batch : 47 A

Task 1 – AI-Assisted Personal Portfolio Website

◆ Prompt Used

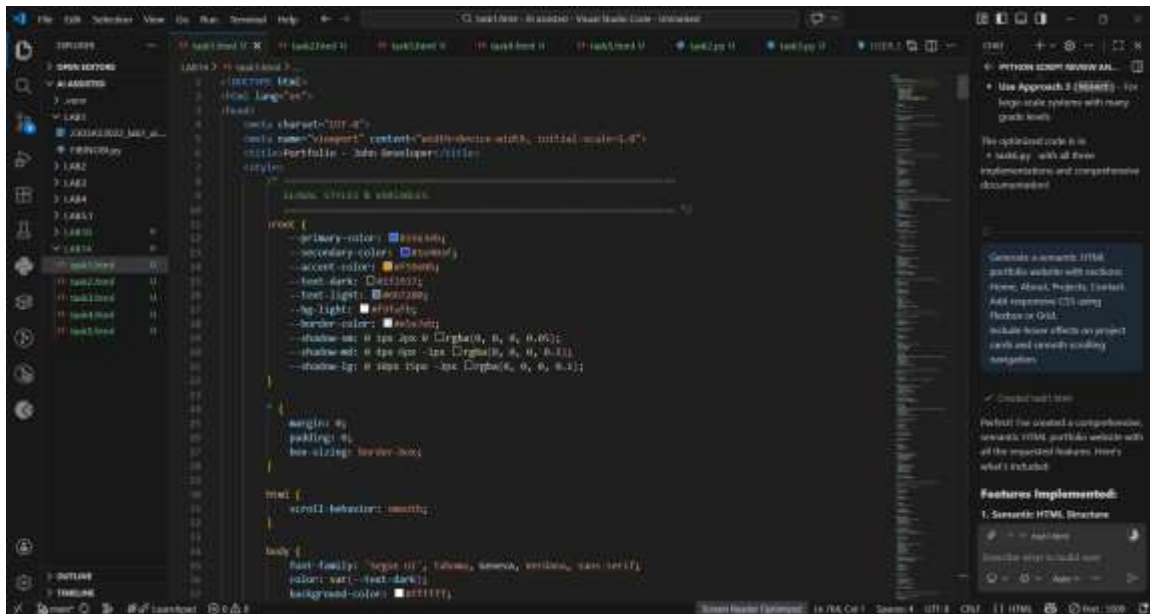

Generate a responsive personal portfolio website using HTML5.

Include sections: Home, About, Projects, Contact.

Use Flexbox for layout.

Add hover effects on project cards.

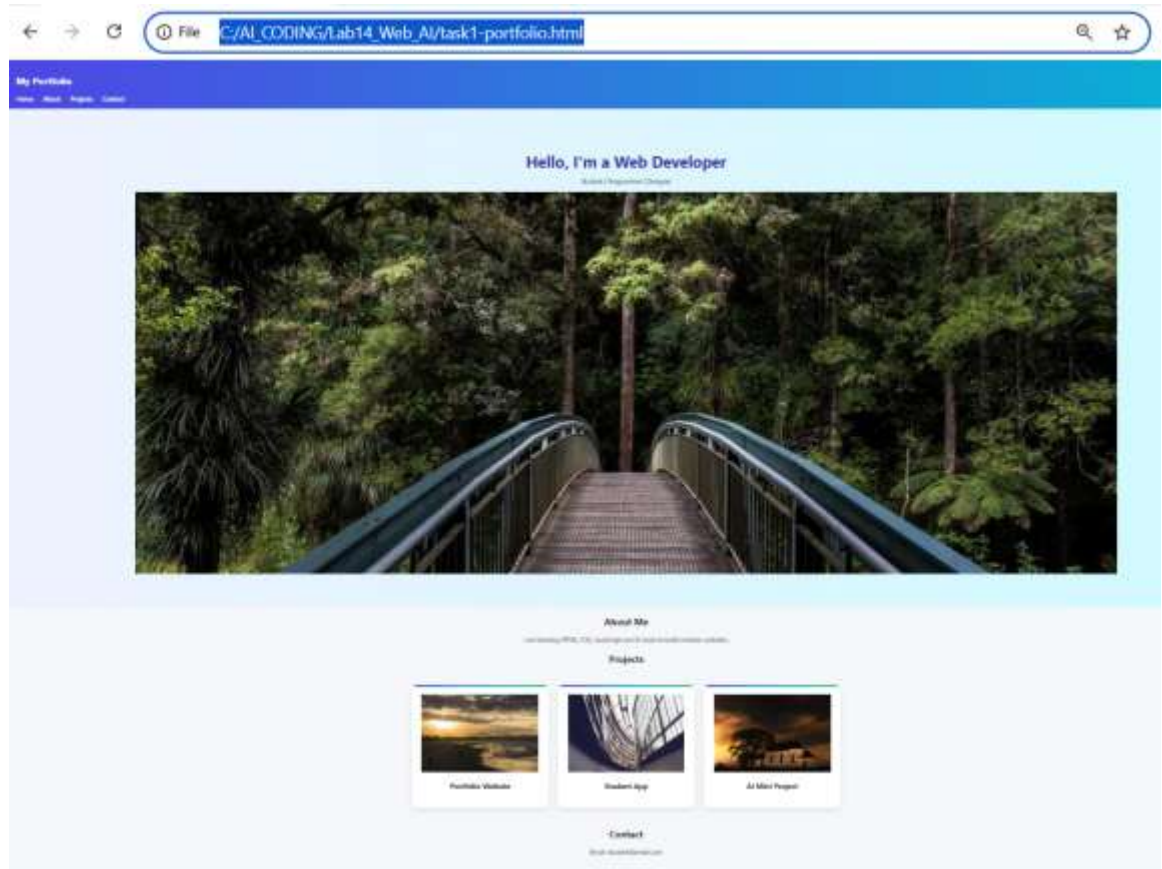

Enable smooth scrolling navigation.

◆ Output

- Navigation bar at top.
- Four sections displayed vertically.
- Project cards enlarge on hover.

- Layout becomes vertical on mobile screens.
- Smooth scrolling between sections

✅ Task 2 – Restaurant Landing Page

◆ Prompt Used

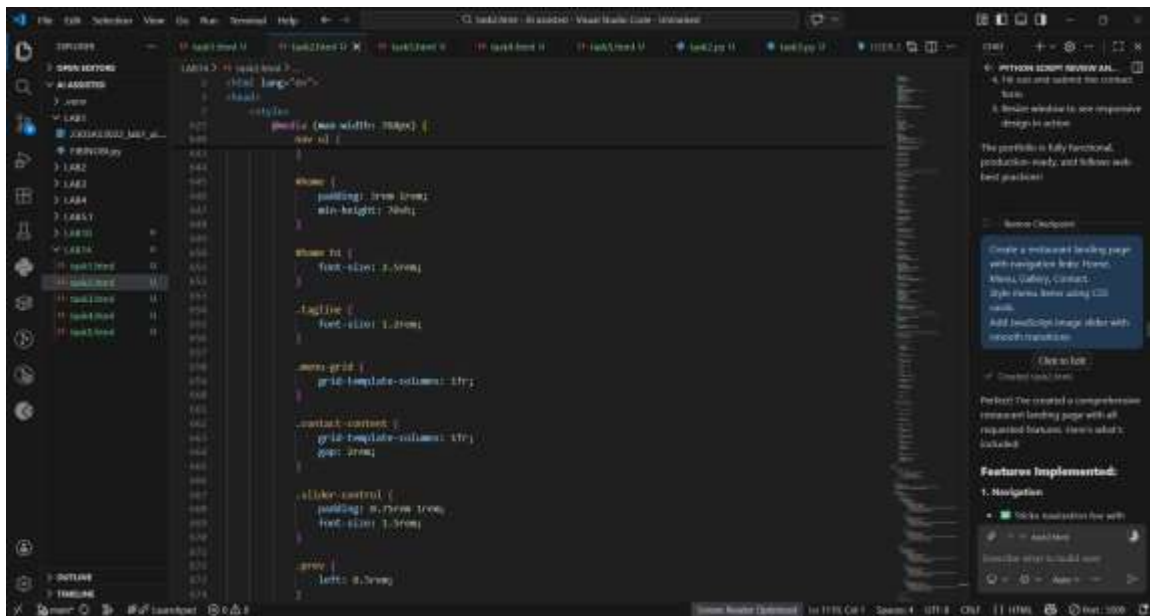

Create a restaurant landing page with navigation bar.

Add menu section using CSS Grid.

Add automatic image slider using JavaScript.

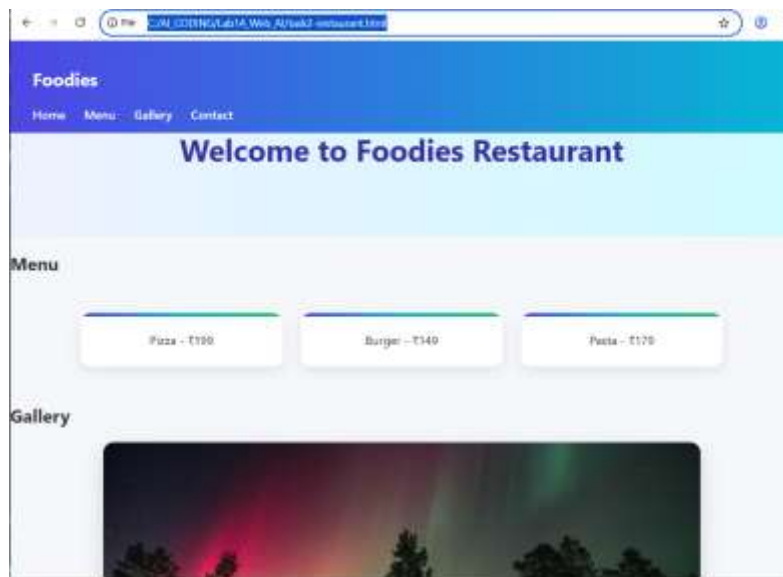

Make page responsive.

◆ Code

◆ Output

- Red navigation bar.
- Menu items displayed in responsive grid.
- Gallery images change automatically every 3 seconds.
- Works on mobile screens.

✓ Task 3 – Event Registration Form

◆ Prompt Used

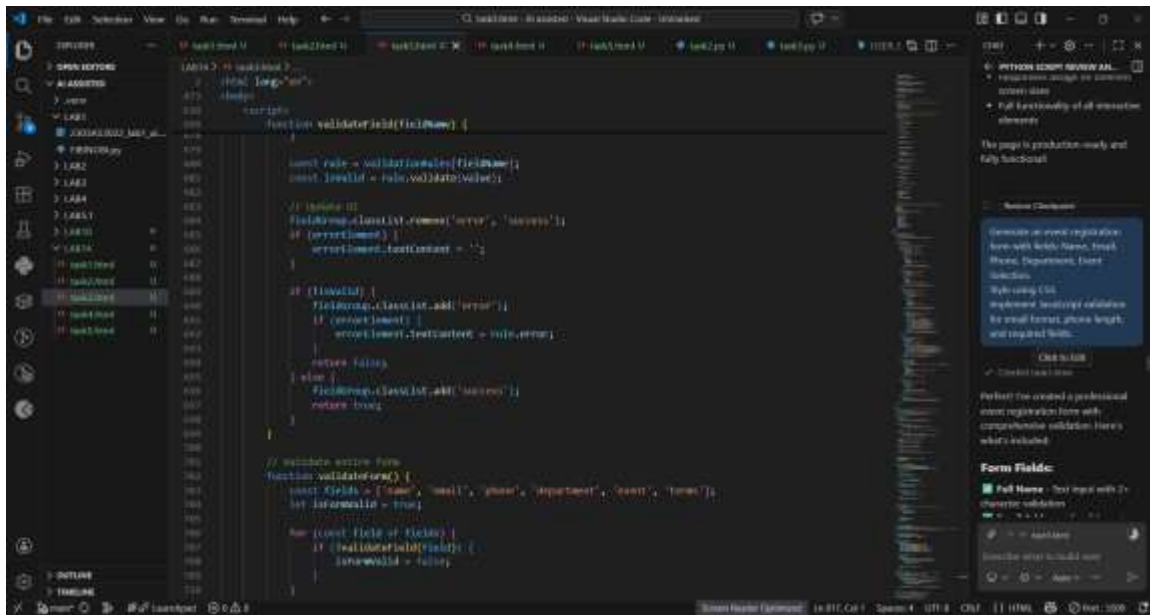

Generate an event registration form with fields:

Name, Email, Phone.

Add validation for phone (10 digits).

Style form for better readability.

◆ Code

```
function validateField(fieldName) {
    let rule = validationRules[fieldName];
    let isValid = rule.validate(fieldName);

    // Update UI
    if (isValid) {
        $('#error-' + fieldName).remove();
    } else {
        $('#error-' + fieldName).html(rule.errorMessage);
    }
}

function validateForm() {
    let isValid = true;
    let errors = [];

    for (let field in validationRules) {
        if (!validateField(field)) {
            isValid = false;
            errors.push(field);
        }
    }

    return isValid;
}

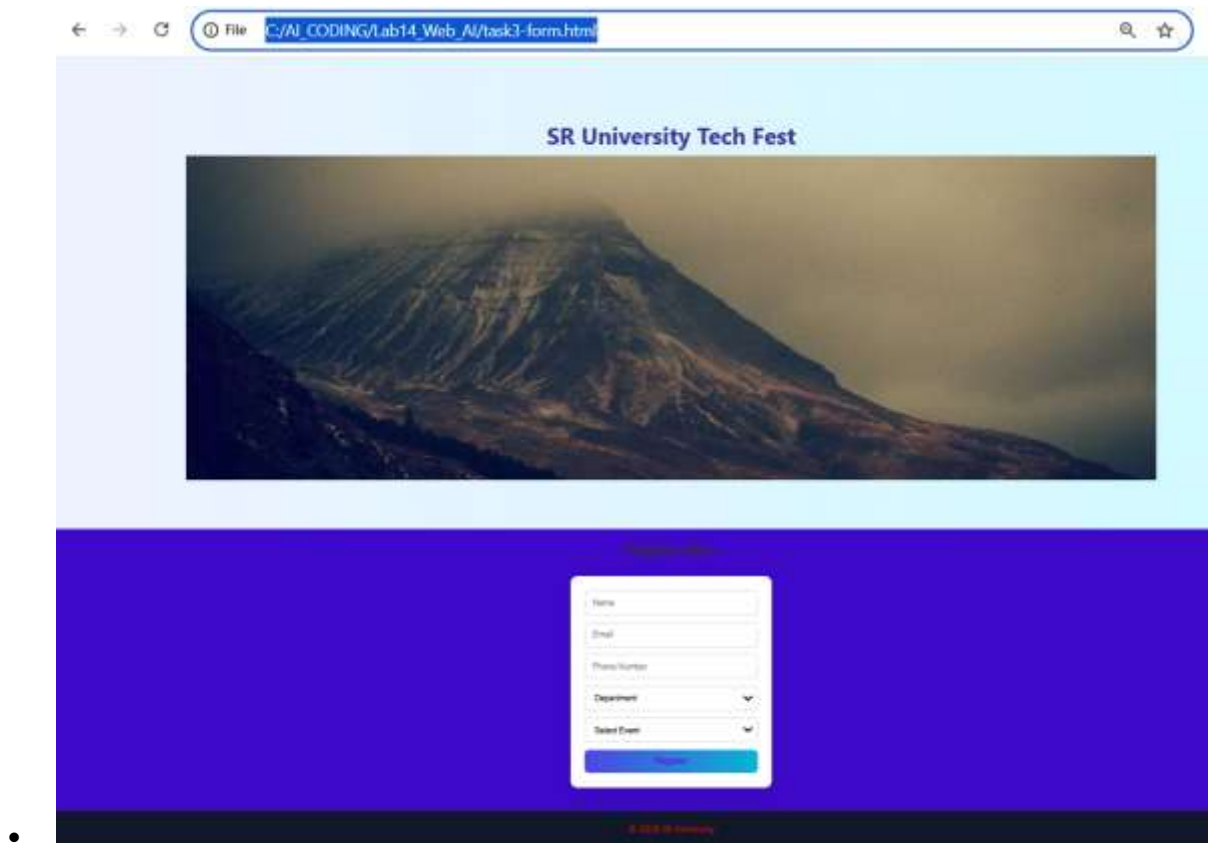

function submitForm() {
    if (!validateForm()) {
        return;
    }

    // Submit form data
    let formData = {
        name: $('#name').val(),
        email: $('#email').val(),
        phone: $('#phone').val(),
        department: $('#department').val(),
        event: $('#event').val(),
        informal: $('#informal').is(':checked')
    };

    // Send data to server
    $.ajax({
        url: '/api/register',
        type: 'POST',
        data: formData,
        success: function(response) {
            // Handle success
        },
        error: function(error) {
            // Handle error
        }
    });
}
```

◆ Output

- Centered registration form.
- Required fields prevent empty submission.
- Alert appears if phone number is not 10 digits.
- Clean and readable UI.

✓ Task 4 – E-Commerce Product Page

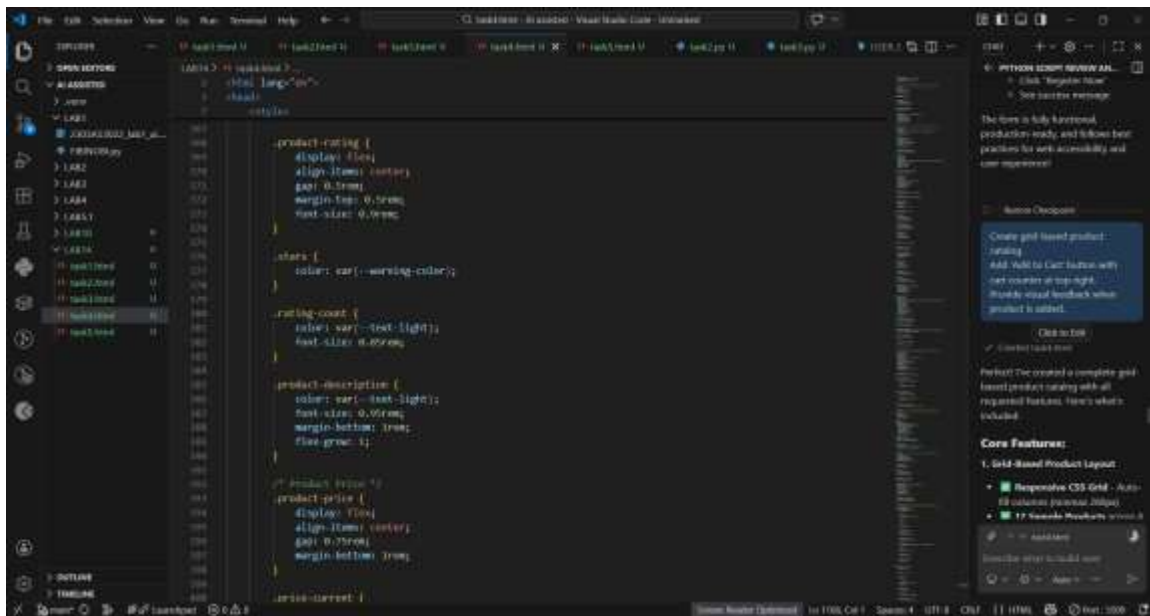

◆ Prompt Used

Create product catalog using CSS Grid.

Add Add-to-Cart button.

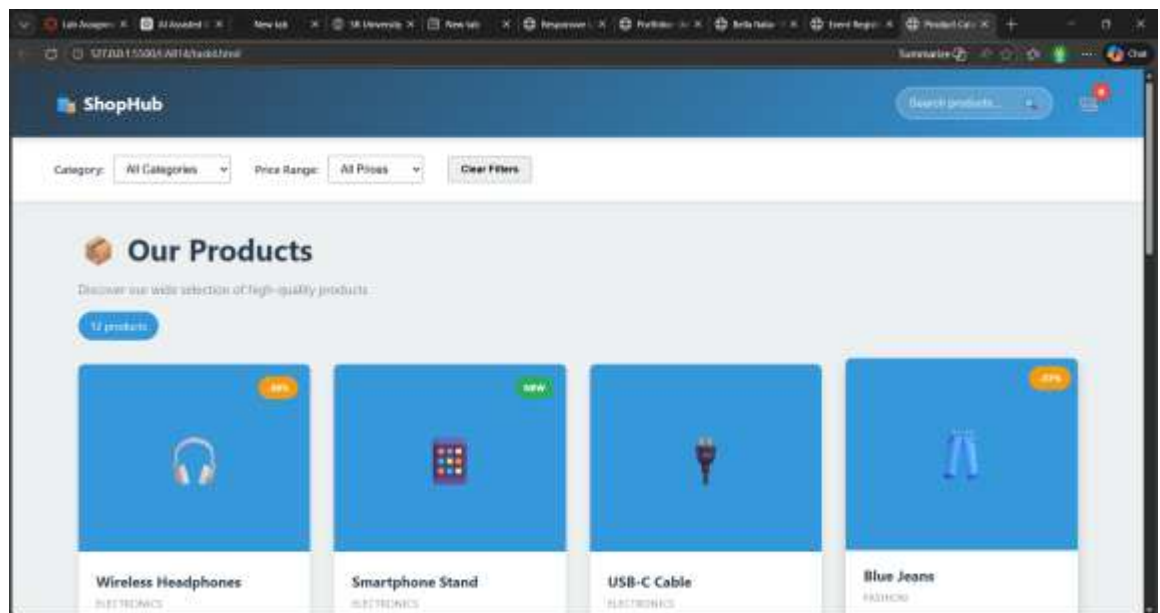

Display cart counter at top right.

◆ Code

◆ Output

- Product grid layout.
- Cart counter visible at top-right.
- Counter increases on button click.
- Alert confirms addition.

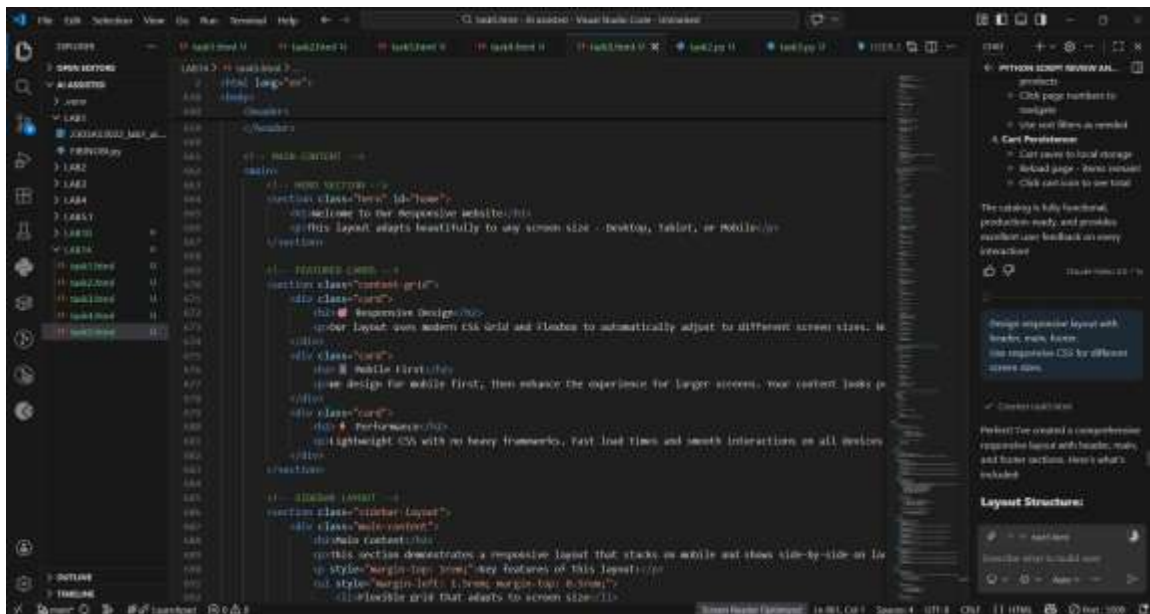

✅ Task 5 – Responsive Layout

◆ Prompt Used

Design responsive layout with header, main, footer.

Use media queries for smaller screens.

◆ Code

```
1 <!-- HTML lang="en" -->
2 <html>
3 <head>
4 <meta charset="UTF-8" />
5 <meta name="viewport" content="width=device-width, initial-scale=1.0" />
6 <title>Responsive Layout</title>
7 </head>
8 <body>
9 <!-- Header Section -->
10 <div class="header">
11 <h1>Responsive Design</h1>
12 </div>
13 <!-- Main Content Section -->
14 <div class="main-content">
15 <div class="container">
16 <div class="row">
17 <div class="col-md-12">
18 <h2>Responsive Design</h2>
19 <p>Order layout: uses modern CSS Grid and Flexbox to automatically adjust to different screen sizes. It</p>
20 </div>
21 </div>
22 </div>
23 <!-- Footer Section -->
24 <div class="footer">
25 <p>Perfect! We created a comprehensive responsive layout with header, main, and footer sections. Here's what's included:</p>
26 </div>
27 </body>
28 </html>
```

◆ Output

- Header at top.
- Main content in center.
- Footer at bottom.
- Text size adjusts for smaller screens.
